

Our Company is a Fintech company focused on providing technologies and consulting to the credit industry, giving a new perspective to financial institutions' assets. We detect any twist of credit performance and offer tools to manage it, from origination to UTP/NPL. Our artificial intelligence systems analyze big data to find untapped value and to guide strategic decisions.

Through the business intelligence and a stratification of specializations, our Company empowers the Clients to process the activities out of the existing standard: modularity and a reduced timing of the output are the results of such a disruptive method.

The ideal candidate
